

MLP for Stock Return Prediction

Architecture Summary:

- Input: 6 financial features (normalized)
- Hidden 1: 8 neurons with ReLU
- Hidden 2: 4 neurons with ReLU
- Output: 1 (predicted return)
- Loss: Mean Squared Error
- Total parameters: $6 \times 8 + 8 + 8 \times 4 + 4 + 4 \times 1 + 1 = 97$
